

CTW Events

ECO-CONCIOUS BY DESIGN

GOOD FOR YOU, BETTER FOR THE WORLD

Our Promise

We are dedicated to helping YOU create a lasting impact, every time. By empowering teams through meaningful experiences and fostering positive change in communities worldwide, we ensure your events go beyond the ordinary. Whether it's strengthening bonds within your team or making a tangible difference in the lives of others, our mission is to make your vision a reality while leaving a legacy of connection, collaboration, and care.

Our Statement of Climate Friendliness

CTW Events is dedicated to shaping a sustainable future through thoughtful actions and impactful initiatives. Our eco-conscious hygiene kits are a prime example of how we're ensuring our efforts benefit both communities in need and the planet we all share. From sourcing responsibly crafted products to partnering with like-minded organizations, we're mindful of every step in our process to maximize positive outcomes and minimize environmental impact. Sustainability isn't just a goal for us—it's a guiding principle in everything we do.

Comb:

Our comb is made from cornstarch, which is biodegradable, and carbon neutral. This comb can be composted and returned to the soil to provide needed nutrients.

Loofah:

Our loofah is a 100% natural, organic, environmentally friendly, biodegradable, and renewable exfoliating sponge.

Soap:

Our kit includes a 100% recycled soap bar*. Our recycled bars come from used bars of soap that are ground into pellets and finely refined to eliminate foreign particles. They are then sterilized, refined, and manufactured into brand-new bars of soap.

**Our soap recycling process includes testing by the biological consulting services laboratory, which tests the new bars of soap for contaminants.*

Dental Tabs:

Our dental tabs are no-waste and made using waterless, carbon-neutral manufacturing. Even the packaging is compostable (certified by TUV OK compost)!

Bamboo Toothbrush:

Our natural bamboo toothbrush is in 100% compostable packaging.

Shampoo:

Our shampoo bottles are made with post-consumer resin, offering a lower carbon footprint. When we use post-consumer resin, we divert waste from landfills, decrease the consumption of raw materials, and reduce emissions.
